RELIABLE WORKFLOW / PARTNER CAPABILITY SHEET

Microsoft automation and AI, delivered with your team.

Specialist implementation for Microsoft partners and consultancies. Bring us into your project for workflow automation, AI agents and integrations, from solution design through testing and handover.

Founder-led delivery / Remote collaboration / English & Korean

Technical capabilities

Power Automate & Microsoft 365

Workflow implementation and process automation.

Copilot Studio

Agent design, action integration and scenario testing.

Microsoft Foundry & Azure AI

AI workflow development and evaluation.

API & Python integration

Custom integrations and automation components.

Solution design & technical review

Technical discovery, architecture and scoped POCs.

Testing, handover & enablement

Test evidence, operating notes and hands-on training.

Ways to work together

Subcontracted delivery. Delegate an agreed technical work package. You manage the client engagement; we design, implement, test and document our part.

Joint delivery. Bring us in as a named specialist alongside your consultants, with shared review points and clearly assigned responsibilities.

Technical advisory. Get focused support with solution design, a technical review or a POC before your team commits to a wider implementation.

Work under your brand or introduce us as a named specialist. We align with your project tools, review cadence and client communication plan.

From introduction to handover

Discuss the opportunity / Outline a small proposal / Review, build and validate / Hand over and plan rollout

The initial fit conversation and high-level proposal are free. Detailed design, technical reviews, POCs and implementation are paid engagements with an agreed fee and schedule. Licensing, deployment and ongoing support are specified separately where needed.

Experience you can inspect

Minseok Song / Founder, Reliable Workflow / Microsoft MVP (Microsoft Foundry)

Minseok Song builds and operates Localizeflow for Microsoft open-source translation, contributes to Co-op Translator and delivers hands-on automation training for corporate teams.

Translation operations / Email workflow tutorial / Invoice lab

The translation example reflects ongoing open-source workflow operations. The email and invoice examples are implementation labs using synthetic data.

Have a project in mind?

Tell me what your team is working on and where you could use support. A short email is enough to start.
